Obasi-Sam Otei (A Quiet Mind)

Backend & Full-Stack Software Engineer

Port Harcourt / Calabar, Nigeria | Portfolio: https://oteiobasisam.me | GitHub: https://github.com/obasi-1

ABOUT ME

I'm a software engineer focused on building reliable backend systems, REST APIs, and full-stack applications. I work primarily with Python, Django, Django REST Framework, PostgreSQL, and React, developing applications that combine structured backend architecture with practical, user-friendly interfaces.

My background in Chemical Engineering has strengthened my analytical thinking and problem-solving approach, helping me understand complex systems and translate ideas into functional solutions.

Beyond traditional software development, I'm exploring AI automation, AI-powered applications, and intelligent workflow systems. I believe great software should be useful, maintainable, and continuously improved.

PROFESSIONAL EXPERIENCE

Full-Stack Development Intern

CodeAlpha | September – October 2026

Completed a virtual full-stack development internship, applying backend and frontend technologies to practical software projects.

- Developed a Kanban-style project management application using Django REST Framework, SQLite, HTML, CSS, and JavaScript.
- Implemented REST APIs to create, update, and manage application data.
- Built interactive features including drag-and-drop task management and comments.
- Strengthened practical skills in debugging, API integration, Git, and GitHub.

Backend Engineering Specialization

ALX Africa | Completed 2025

Completed a software engineering programme focused on backend development and application architecture.

- Developed RESTful APIs using Python and Django.
- Worked with relational databases, Django ORM, authentication, and database design.
- Gained practical experience with Git, Docker, CI/CD concepts, and backend engineering workflows.

Industrial Trainee — Chemical Engineering

Marian Table Water | 2025

- Studied industrial water treatment, purification, packaging, and quality control processes.
- Participated in quality-control activities involving pH, chlorine residual, turbidity, and microbial quality.
- Documented manufacturing workflows and identified opportunities for improved monitoring and automation.

FEATURED PROJECTS

Trimly — Full-Stack URL Shortener

A web application for creating shortened URLs, generating QR codes, and tracking link activity.

Technologies: Python, Django REST Framework, PostgreSQL, React, Vite, Render, Vercel.

Key features:

- URL shortening and redirect functionality, with dynamic QR code generation.
- Click tracking and analytics in a decoupled frontend and backend architecture.

Buildora — Developer Learning Platform

A full-stack learning platform designed to help aspiring developers develop programming skills through structured lessons and practical projects.

Technologies: Python, Django, Django REST Framework, React, PostgreSQL, Neon, Render, Vercel.

Key features:

- User registration, JWT authentication, structured learning paths, and modules.
- Progress tracking, personal dashboards, and an interactive Python practice environment.

Live project: https://www.build-or-a.tech/

Developer Portfolio

A personal platform showcasing my software engineering journey, technical projects, and development experience.

Technologies: React, Django, REST APIs, Vercel, Render.

Features a modern interface, project showcases, and independently deployed frontend and backend services.

Website: https://oteiobasisam.me

Teleclinic — In Development

A full-stack telemedicine platform designed to connect patients and healthcare professionals through accessible digital healthcare services.

Technologies: Python, Django REST Framework, React, PostgreSQL, with Google Gemini integration under development.

TECHNICAL SKILLS

Backend Development: Python, Django, Django REST Framework, REST APIs, GraphQL.

Databases: PostgreSQL, SQLite, SQL, Django ORM, database design.

Frontend Development: React, JavaScript, Vite, HTML, CSS.

DevOps & Deployment: Git, GitHub, Docker, CI/CD, Render, Vercel.

Tools: VS Code, Postman, GitHub Actions.

Areas of Interest: Backend Architecture, AI Automation, API Security, Data Engineering, and Intelligent Applications.

EDUCATION

Bachelor of Engineering — Chemical Engineering

University of Calabar | In Progress

Relevant areas include process simulation, quantitative analysis, fluid mechanics, and engineering system modeling.

CERTIFICATIONS & TRAINING

- Full-Stack Development Virtual Internship — CodeAlpha, October 2026.
- Software Engineering: ProDev Backend — ALX Africa, 2025.
- Professional Foundations — ALX Africa, June 2025.

LET'S CONNECT

I'm interested in backend engineering opportunities, collaborative development, AI-powered applications, and projects that solve meaningful problems.
